

# Anesthesiology: Perioperative Neuroprotection/Glucose Management (Audio-Digest Foundation Anesthesiology Continuing Medical Education (CME). Volume 54, Issue 14)

This is the written summary of the audio cme program that accompanies the paid subscription. Audio-Digest is providing this summary via Kindle as a service to our subscribers and as a sample to the general public. Purpose: Audio-Digest Foundation CME/CE activities are designed to provide its learners physicians and other healthcare professionals with continuing education that will help identify clinical problems in their practice settings, provide content to help to solve those problems, and increase their application of knowledge to practice. Audio-Digest Anesthesiology is specifically designed to provide the participant with state-of-the-art information including, but not limited to: Hazards of working in the OR Hemostasis and hemotherapy Opioids vs. non-opioid anesthesia Inhalation anesthesia Muscle relaxants Local anesthetics Preoperative medication Airway management Monitoring the anesthetized patient Epidural and spinal anesthesia Peripheral nerve blockade Cancer therapy and its anesthetic implications The allergic response Anesthesia for nonoperative locations Postoperative recovery Management of acute and chronic pain The goal of this program is to improve perioperative management by reviewing evidence on the effectiveness of perioperative neuroprotection and by improving perioperative glucose control. After hearing and assimilating this program, the clinician will be better able to:

- 1: Assess whether neuroprotective interventions are effective.
- 2: Identify and apply interventions that are known to be effective.
- 3: Diagnose diabetes according to the criteria established by the American Diabetes Association.
- 4: Manage glycemic complications of surgery and anesthesia.
- 5: Develop an appropriate treatment plan for a patient with perioperative hyperglycemia.
