

## Architecture and the Virtual

Architecture and the Virtual is a study of architecture as it is reflected in the work of seven contemporary artists, working with the tools of our post-digital age. The book maps the convergence of virtual space and contemporary conceptual art and is an anthropological exploration of artists who deal with transformable space and work through analog means of image production. Marta Jecu builds her inquiry around interviews with artists and curators in order to explore how these works create the experience of the virtual in architecture. Performativity and neo-conceptualism play important roles in this process and in the efficiency with which these works act in the social space.
